For humans, the team believes this circuit may explain why seasonally cold and dark conditions hinders the brain's ability to wake up and be active. "This helps explains why — for both flies and humans — it is so hard to wake up in the morning in winter," study lead Marco Gallio says in a university release.

In Blaming the Brain Elliott Valenstein exposes the many weaknesses inherent in the scientific arguments supporting the widely accepted theory that biochemical imbalances are the main cause of mental illness. He lays bare the commercial motives of drug companies and their huge stake in expanding their markets. This provocative book will force patients, practitioners, and prescribers alike to rethink the causes of mental illness and the methods by which we treat it.

Nicola Morgan is something of an authority on the teenage brain and is often invited to schools and colleges to speak on the subject. She came up with the idea of 'The Teenage Guide to Stress' because so many parents and teenagers contacted her for advice and help. The book is divided into three sections: Section one explains what stress is and looks at the ways teenage stress is different. Section two deals with a number of issues that affect teenagers - from anger, depression and sexual relationships to cyber-bullying, exams and eating disorders - and offers guidance and advice, as well as looking at how pre-existing conditions such as OCD and dyslexia are affected by adolescence. Section three is concerned with how to deal with and prevent the symptoms of stress, as well as healthy ways of looking after your mind and body.

Preposterous as it sounds, we are not who we seem to be. Not even close. At the heart of this misperception is our deep-seated conviction of free choice. Based on emerging neurobehavioral science findings, The Deceptive Brain makes the case for human experience as a narrative illusion—an executive summary of sorts—that emerges from an incredibly complex brain. The Deceptive Brain drills down on what this finding means for the way we blame and punish, and presents a bold alternative approach to criminal justice based on blameless responsibility.

Nicola Morgan explains how the brain functions and how to make it work in the best possible way. With sections on intelligence and genius, dyslexia and autism, and keeping the brain fit and healthy, this book explores the marvellous thing that makes us who we are.

Depression, Attention Deficit Disorder, Alcoholism, Homosexuality. Research suggests that more and more behaviors are caused by brain function or dysfunction. But is it ever legitimate to blame misbehavior on the brain? How can I know whether ?My brain made me do it Viewing brain problems through the lens of Scripture, Edward T. Welch distinguishes genuine brain disorders from problems rooted in the heart. Understanding that distinction will enable pastors, counselors, families, and friends to help others-or themselves-deal with personal struggles and responsibilities. While focusing on a few common disorders, Dr. Welch lays out a series of practical steps adaptable to a wide range of conditions, habits, or addictions.
