Researchers are finding in such patterns--phenomena that have fascinated naturalists for centuries--a fertile new approach to understanding biological systems: the study of self-organization. This book, a primer on self-organization in biological systems for students and other enthusiasts, introduces readers to the basic concepts and tools for studying self-organization and then examines numerous examples of self-organization in the natural world. Self-organization refers to diverse pattern formation processes in the physical and biological world, from sand grains assembling into rippled dunes to cells combining to create highly structured tissues to individual insects working to create sophisticated societies. What these diverse systems hold in common is the proximate means by which they acquire order and structure. In self-organizing systems, pattern at the global level emerges solely from interactions among lower-level components. Remarkably, even very complex structures result from the iteration of surprisingly simple behaviors performed by individuals relying on only local information. This striking conclusion suggests important lines of inquiry: To what degree is environmental rather than individual complexity responsible for group complexity? To what extent have widely differing organisms adopted similar, convergent strategies of pattern formation? How, specifically, has natural selection determined the rules governing interactions within biological systems? Broad in scope, thorough yet accessible, this book is a self-contained introduction to self-organization and complexity in biology--a field of study at the forefront of life sciences research.

In this chapter, we learn that E1903 changed in 2011 from a standard guide to a standard practice. This represents a significant change to the way in which the ESAs are conducted. The scoping process enables the consultant and the user to establish a mutually acceptable process that is based on scientific principles. The consultant designs the process. A thorough understanding of the objectives, needs, limitations, and requirements is crucial in the determination of the appropriate scope of the work. In this chapter, we introduce the potential diversity of Phase II ESAs, which will be further demonstrated by examples and case studies in the subsequent chapters.

This study proposes a new view of glossing as a universal phenomenon. Starting from the Psalter, a centrepiece of devotion and education in early medieval Europe, it combines historical sociolinguistics, comparative philology, manuscript studies and cultural history in order to assess and compare the interface of Latin with Old Irish, Old English, Old Frisian, Old Saxon and Old High German within the context of its multilingual and textual culture. The close study of thirteen glossed manuscripts, such as the Anglo-Saxon Vespasian Psalter and the Old Irish Milan Glosses, reveals when and why scribes switched from Latin into the vernacular, how the vernacular was used in studying Latin, how glosses interact with construe marks and punctuation, and how such manuscripts were intended to be read in a period covering the seventh to the twelfth centuries and in an area stretching from

Ireland to Central Europe. The book is an essential textbook for specialists in the growing field of glossing, and also reaches out to scholars of early medieval liturgy, education, palaeography and Christian literature.

As bankers incorporate more and more complicated and precise calculations and models, a solely mathematical approach will fail to confirm the viability of their business. This book explains how to combine ALM concepts with the emotional intelligence of managers in order to maintain the financial health of a bank, and quickly react to external environment challenges and banks' microclimate changes. ALM embraces not only balance sheet targets setting, instruments and methodologies to achieve the targets, but also the correct and holistic understanding of processes that should be set up in a bank to prove its prudence and compliance with internal and external constraints, requirements and limitations and the ongoing continuity of its operations. Bank Asset Liability Management Best Practice delves into the philosophy of ALM, discusses the interrelation of processes inside the bank, and argues that every little change in one aspect of the bank processes has an impact on its other parts. The author discusses the changing role of ALM and its historical and current concepts, its strengths and weaknesses, and future threats and opportunities.

"There are forces better recognized as belonging to human society than repressed or left to waste away or growl about upon its fringes." So writes Valerie Flint in this powerful work on magic in early medieval Europe. Flint shows how many of the more discerning leaders of the early medieval Church decided to promote non-Christian practices originally condemned as magical--rather than repressing them or leaving them to waste away or "growl." These wise leaders actively and enthusiastically incorporated specific kinds of "magic" into the dominant culture not only to appease the contemporary non-Christian opposition but also to enhance Christianity itself.

This book reports on excavations at Paithan in India revealed the development of two early Hindu temples from the 4th century to the 9th: the key formative phase of Hinduism. The temples started as small shrines but were elaborated into formal temples. In relation to these changes, the excavations revealed a sequence of palaeobotanical and palaeofaunal evidence that give insight into the economic and social changes that took place at that time.

Torture has lately become front page news, featured in popular movies and TV shows, and a topic of intense public debate. It grips our

imagination, in part because torturing someone seems to be an unthinkable breach of humanity—theirs and ours. And yet, when confronted with horrendous events in war, or the prospect of catastrophic damage to one's own country, many come to wonder whether we can really afford to abstain entirely from torture. Before trying to tackle this dilemma, though, we need to see torture as a multifaceted problem with a long history and numerous ethical and legal aspects. *Confronting Torture* offers a multidisciplinary investigation of this wrenching topic. Editors Scott A. Anderson and Martha C. Nussbaum bring together a diversity of scholars to grapple with many of torture's complexities, including: How should we understand the impetus to use torture? Why does torture stand out as a particularly heinous means of war-fighting? Are there any sound justifications for the use of torture? How does torture affect the societies that employ it? And how can we develop ethical or political bulwarks to prevent its use? The essays here resist the temptation to oversimplify torture, drawing together work from scholars in psychology, history, sociology, law, and philosophy, deepening and broadening our grasp of the subject. Now, more than ever, torture is something we must think about; this important book offers a diversity of timely, constructive responses on this resurgent and controversial subject.
