Sixty years ago, four men parachuted onto a Norwegian glacier, carrying only the most basic equipment. Their mission was to prevent the Nazi regime from building an atomic bomb. Now wilderness expert Ray Mears tells the true story of this gruelling campaign, showing how these men's ability to survive in extreme conditions influenced the outcome of the Second World War. The Telemark campaign was an example of the bravery and skill of the SOE trainees. The Norwegians transformed a military disaster into a triumph. This book tells the full story for the first time.

No Single vision for the future of America existed after the Revolution. In light of social and economic changes, America's scope shifted from community-mindedness-the very heart of the republican ideal-to economic individualism. In Moral Visions and Material Ambitions, A. Kristen Foster describes how eager young entrepreneurs in Philadelphia manipulated America's moral vision of a classical republic to facilitate their own material ambitions, fostered by the free market economy that arose between 1776 and 1836. As market developments changed economic relationships in the city, men and women used the Revolution's republican language to help explain what was happening to them, and in the process they helped redefine class structure in Philadelphia. This study explores the ways Philadelphians used the Revolution and its powerful language of liberty and equality to impose meaning on their lives, as an expanding market irreversibly changed social and economic relationships in their city and, eventually, throughout the rest of the country.
