This book explores the overlapping interests of corporate responsibility and sustainable development, specifically focusing on the dynamics of social change, sustainability governance and evaluation, and creating social value. Corporate Responsibility and Sustainable Development: An Integrative Perspective draws on ideas and research relevant to both concepts, highlighting the interdependent nature of corporate strategy and policymaker ambition. The authors seek to capture that any evaluation of responsibility for sustainable development demands multiple lenses. They propose an integrative understanding to tackling global challenges around sustainable development and focus on four themes: contextualisation, perspectives on social change, sustainability governance and evaluation, and creating social value. Overall, the book takes an evaluative approach, using these themes as lenses for engaging with global challenges, which encourages reflection and informed action. Written by two highly experienced authors, this book integrates short case studies and chapter questions throughout the text, in order to reinforce learning and help readers reconcile ideas presented with real world issues. It will be an essential resource for tutors and advanced undergraduate and postgraduate students of business, governance and corporate governance, corporate social responsibility (CSR), sustainability and sustainable development, stakeholder theory, business ethics, and politics.

This book presents a practical approach to pro-environmental challenges faced by companies in the process of restructuring. It contains a broad variety of case studies from different economic sectors, and small and large businesses, in four European countries: Ukraine, Romania, Germany and Poland. The studies are the results of surveys of companies that had either already restructured or were planning to, and reveal both the weaknesses and strengths in these practices. The book is divided into three parts: explorations of how political and legal factors are embedded in a company's strategy and how they influence the company's behaviour; analyses of companies' activities on matching restructuring with ecology; and approaches to ecoinnovations within the companies. The case studies throughout the book show that the restructuring of a company is an opportunity for the implementation of proecological action and "green" business models. The authors trust that the experiences and good practices of others will prove valuable both for future businessmen (i.e. students), but also for academics and representatives of local government, central environmental agencies, owners and managers of enterprises to be restructured.

The book describes the most important quality management tools (e.g. QFD, Kano model), methods (e.g. FMEA, Six Sig-ma) and standards (e.g. ISO 9001, ISO 14001, ISO 27001, ISO 45001, SA8000). It reflects recent developments in the field. It is considered a must-read for students, academics, and practitioners.
