## chapter

This book has only one goal: to help you succeed in a beginning calculus course. The book begins with a comprehensive self-assessment test and review of the math you'll need before you start calculus: basic algebra, functions and graphs, polynomial and rational functions, trigonometry, and both exponential and logarithmic functions. Next, it provides five sample mid-term exams and five detailed final exams, so you'll know exactly what to expect. Best of all, the exams are followed by detailed explanations that walk you through how every answer was arrived at. The more you see it done, the more you practice, the better you'll do -- it's that simple. College, university and high school students preparing to take an introductory calculus course.
