Läsionen des Plexus brachialis (eBook, 2019) [WorldCat.org]

The major nerve trunks of the thoracic limb were the suprascapular, subscapular, axillary, radial, musculocutaneous, median and ulnar nerves. In Van cats, the brachial plexus was formed by the ventral branches of the spinal nerves, C6-C8 and T1. The 7th cervical nerve was quite thick compared to the others.

This second edition of a very successful vascular surgery text was developed in order to address significant changes that have occurred in contemporary vascular surgery and to highlight new information that has developed regarding vascular imaging, interventional and endovascular procedures. The overall length of the text is slightly shorter than the first edition with relevant core chapters being retained to emphasize the basic science nature of the text, with approximately 60% of the material undergoing major revisions or being new chapters. The significant change from the first text is an emphasis on vascular pathology and physiology that is relevant to current practice including information that is currently included on the vascular board examinations. A new emphasis on endovascular therapies has been added by including five chapters on endovascular techniques and an additional section with six chapters comparing conventional vascular reconstruction to endovascular methods. These new chapters address the most important issue in contemporary vascular surgery, i.e., the role of endovascular methods in treating vascular lesions and the impact that this has on training and credentialing. A unique aspect of this book differentiating it from other texts is a comparison of conventional methods with the endovascular techniques. Overall the text provides a comprehensive perspective of contemporary vascular surgery and future perspectives. The authors are preeminent in the field and are most capable for addressing the assigned topics with the goals being to provide an updated and forward looking text that accommodates the needs of practicing and training vascular surgeons.

A detailed guide perfect for all skill levels takes artists step-by-step through the process of depicting realistic animals, from drawings of skeletons and how they move at the joint, to comparisons of shapes and proportions and photographs of live animals.

Die zweite englische Auflage dieses erfolgreichen Lehrbuches ist nun auch nach dem bewährten Konzept der „Budras-Atlanten“ durch namhafte Experten aus der Anatomie und der klinischen Medizin um die klinisch-funktionelle Anatomie erweitert. „This is a much-needed textbook-atlas that depicts bovine anatomy. It is appropriately organized such that it can easily be the single book that veterinarians refer to when an anatomic question needs to be answered about this species. It is most definitely worth the price.“ JAVMA - Journal of the American Veterinary Medical Association

Providing angiologists and vascular surgeons with a comprehensive survey of all aspects of vascular diseases from diagnosis to treatment, all the clinical pictures here are documented by pathological pictures, angiograms or X-rays. Specific cases of differential diagnosis are included as are surgical photographs concerning the treatment of the diseases. The text thus combines the interests of vascular surgeons, angiologists, radiologists and cardiologists in a unique atlas and text combination.

This book covers all relevant techniques of diagnosis as well as interpretations of clinical signs in Clinical Neuro-Ophthalmology. All information is highly structured, highlighting 'definition', 'note' and 'pearl', so that it can also be used by the physician during the patient encounter. The included flow chart posters remind the physician of the most important information. This unique and practical guide offers invaluable and practical advice for physicians treating patients with neuro-ophthalmic problems.

Pernkopf's atlas has been called a "troubled masterpiece." It has been praised for its artistry and accurate detail but has attracted controversy due to Pernkopf's Nazi connections and the findings of the 1998 commission at the University of Vienna that some of the illustrations were based on executed victims of political terror. It remains unproven however that any illustrations were based on Jewish victims or prisoners or war.
